

TABLE 2

NOTES FOR TABLE 2

Farmstead sites determined to potentially have local or national significance: a comparison of statistics from the Agricultural Schedules of the Federal Census. The following table shows the size, animal population, and crop yields as documented in the Agriculture Schedules of the Federal Census for the farmstead sites determined to potentially have local or national significance. Agriculture statistics for the 1860, 1870, and 1880 Federal Census are provided. Farms marked with a superscript 1 (¹) indicate acreage much larger than reflected by farm's yields. This possibly indicates that the farmer owned land that was leased to others. Portions of the table shaded gray indicate that census data for the farm was either not recorded or could not be readily identified.
